## SharePointHQ Completes Migration to SharePoint 2007 for Sunnybrook Health Sciences Centre

### SharePointHQ Completes Migration to SharePoint 2007 for Sunnybrook Health Sciences Centre

*SharePointHQ Completes Migration to SharePoint 2007 for Sunnybrook Health Sciences Centre Toronto, Ontario, Canada – November 6, 2007 – SharePointHQ®, a leading provider of training, professional services, hosting, web parts and solutions for Microsoft® SharePoint® Products and Technologies, announced today that it has completed the migration of Sunnybrook Health Sciences Centre's hospital portal to Windows SharePoint Services 3.0 (WSS 3.0) to be used by Sunnybrook's 10,000 physicians, nurses and medical support staff to meet the healthcare needs of one million people per year.*

Toronto, Ontario, Canada – November 6, 2007 – SharePointHQ®, a leading provider of training, professional services, hosting, web parts and solutions for Microsoft® SharePoint® Products and Technologies, announced today that it has completed the migration of Sunnybrook Health Sciences Centre's hospital portal to Windows SharePoint Services 3.0 (WSS 3.0) to be used by Sunnybrook's 10,000 physicians, nurses and medical support staff to meet the healthcare needs of one million people per year.

After evaluating several potential vendors within the Toronto IT marketplace, Sunnybrook chose SharePointHQ to perform the migration of its previous hospital portal, based on Windows SharePoint Services 2.0, to Windows SharePoint Services 3.0. The new WSS 3.0 portal was fully configured to take advantage of SharePoint 2007's Collaboration feature group's capabilities. The hospital portal delivers to Sunnybrook a secure, centralized portal, with advanced document collaboration features, accessible to hospital end users through a single point of access. Cooperation and collaboration between Sunnybrook's end users, teams and departments are further enhanced by SharePoint 2007's Web 2.0 functionality.

The migration to SharePoint 2007 was performed by SharePointHQ's Professional Services division using the gradual upgrade migration method. SharePointHQ Professional Services solutions include custom branding, workflows, contract management, departmental solutions and custom development SharePoint portals, and are built upon the SharePointHQ JumpStart Platform. The JumpStart Platform allows companies to rapidly implement Windows SharePoint Services 3.0 or Microsoft Office SharePoint Server 2007 as their collaborative enterprise portal within their organization.

For more information on SharePointHQ's solutions, contact Mr. Grant Jurgeneit, Americas Sales Manager, SharePointHQ Professional Services, at 416-585-9678 ext. 284 or [Consulting@SharePointHQ.com](mailto:Consulting@SharePointHQ.com). For a case study on Sunnybrook Health Sciences Centre's migration to SharePoint 2007 contact us.
